

# Installing on Windows - Core

## Download Unimus Core

Core for Windows is available in 2 versions:

- Standard installer
- Portable (standalone)

Download link:

<https://unimus.net/download.html>

For information on running Core in Portable mode, please [see this wiki article](#).

## Install Unimus Core

Running the installer will install Unimus Core on your computer - just like any other program. This includes installing the Core as a service, so it will automatically run when your PC starts

To install Core, simply go through the install wizard.

The install wizard will ask for all required information to configure the Core.

After the wizard finishes and the Core service starts, you should see your Core online in Unimus.
