Panopta importer

The Panopta importer in Unimus is very simple to configure, since all configuration of which devices to import is done in Panopta.
You will require a Panopta "NCM" license for all devices you wish to import into Unimus.

After you license your devices for "NCM" in Panopta, simply insert your "OnSight Key" and import devices into Unimus.
You can get the "OnSight Key" from the Panopta Control Panel.

Panopta importer supports remote **UUIDs**.
